## ECOLOGIC™ FOAM TEST SYSTEM MOBILE CART

The ECOLOGIC™ mobile cart foam test system is an input-based testing system designed to provide fire departments the means to test the accuracy of their foam system without the expense or environmental impact of using foam to perform an output-based test. A single cart can be used to test multiple trucks and is an excellent system for retrofitting vehicles currently in your fleet.

### SPECIFICATIONS

- Compact and easy to transport
- Economical test method
- Adaptable to most ARFF vehicles
- Accurate and reliable testing method
- Environmentally responsible
- NFPA 412 approved method
